DETAILED ACTION

Response to Amendment

1. This Office action is in response to the reply filed on 08/19/2009. Claims 1-4, 6-14 and 16-20 are pending.

2. The declaration filed on 08/19/2009 under 37 CFR 1.131 has been considered but is ineffective to overcome the Presenz et al. (US 2003/0091823 A1) reference because the reference has a 102(b) prior art date against the claimed invention. Note that the U.S. effective filing date of the instant application is 07/13/2004 while the publication date of the reference is 05/15/2003.

Response to Arguments

3. Applicant's arguments, see Remarks (pages 2-7), filed 08/19/2009, with respect to the rejection of claims 1-4 and 6 under 35 U.S.C. 103(a) as being unpatentable over Tung et al. (US 2003/0027912) in view of Presenz et al. (US 2003/0091823) have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

Allowable Subject Matter

4. Claims 1-4, 6-14 and 16-20 are allowed.

Art Unit: 1796

5. The following is an examiner's statement of reasons for allowance: The present claims are allowable over the closest prior art reference of record: Tung et al. (US 2003/0027912).

The present invention is drawn to a process of preparing a molding composition comprising melt-mixing a thermoplastic polymer, a non-metallic fibrous reinforcing agent and elementary iron having an average particle size of 450 microns or less, wherein the polymer forms a continuous phase and is a semi-crystalline or crystalline polymer having a melting temperature of at least 180°C or an amorphous polymer having a T_g of at least 180°C, and wherein the amount of the elementary iron is 0.01-20 parts based on 100 parts of the polymer.

Tung et al. discloses a process of preparing a molding composition for making bottles, said process comprising preparing a masterbatch comprising a thermoplastic resin and iron particles followed by melt-blending the masterbatch with the base resin. The iron particles have a plurality of sizes, ranging from 1 micron to 75 microns. The thermoplastic resin comprises polyamides such as nylon 6, nylon 66, nylon 612 and a host of others. Nylon 6 is normally a crystalline polyamide having a melting point over 200°C. The amount of the iron particles is 0.005-0.25 parts based on 100 parts of the resin, but can be much higher. The reference fails to teach non-metallic fibrous reinforcing agent. It would not have been obvious to a person having ordinary skill in the art at the time the invention was made to have incorporated non-metallic fibrous reinforcing agent in the composition taught by Tung et al. to arrive at the instant invention because the reference and the presently claimed invention belong to different

Art Unit: 1796

fields of endeavor (i.e., the presently claimed invention is not directed to making bottles).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
